

PDF Template Test Report

Generated Report

Executive Summary

This report demonstrates the PDF template functionality of the Intelligent Report Generator.

Introduction

The Intelligent Report Generator now supports PDF templates that can be used to create consistently formatted reports.

Template System

The template system allows you to create reusable PDF templates with placeholders for different sections.

These templates can be populated with content from the report generator, making it easy to create professional-looking PDFs.

How It Works

1. Create a template using the `create_pdf_template` method 2. Add content to your report using the usual methods 3. Generate a PDF using the `generate_pdf_from_template` method

Alternatively, you can generate a PDF directly from your report sections without a template using the `generate_pdf` method.
